IEI Vice President selected as Homeland Security Policy Institute Senior Fellow

Washington, DC (Mar. 7, 2006) – Dexter Ingram, Vice President of Business Development and Government Relations of Ingram Engineering, Inc.(IEI), has been selected as a Senior Fellow at George Washington University's Homeland Security Policy Institute (HSPI). The announcement came at a reception for the 2006 senior fellows, where House Committee on Homeland Security Chairman, Peter King, together with members of the HSPI Steering Committee, welcomed the new group.

Senior fellows are drawn from government, academia, non-profit, and private sectors, with expertise in areas ranging from intelligence to bioterrorism to critical infrastructure protection. Throughout the year, senior fellows participate in roundtable sessions with senior government officials, and collaborate with the HSPI Steering Committee to publish policy papers and undertake homeland security research projects.

HSPI draws on the expertise of the George Washington University and its partners from academic, non-profit, policy and private sectors for a common goal of better preparing the nation for the threat of terrorism. HSPI frames the debate, discusses policy implications and alternatives and recommends solutions to issues facing America's homeland security policymakers. By linking academics and scientists to decision-makers at all levels of government HSPI works to build a bridge between theory and practice in the homeland security arena.

"This role will tightly integrate Dexter into the HSPI's mission and the Homeland Security arena," said Vern Ingram, President and CEO of IEI. "Dexter continues his commitment to and participation in programs that make our country stronger." Dexter has more than 13 years of experience in government and private industry. At IEI, he manages strategic business initiatives, and represents the company at public and private meetings and conferences. He also directs IEI public relations and marketing efforts, including professional publications, presentations, and media interviews.

IEI is an SBA certified 8(a) and Service-Disabled Veteran owned company that provides systems engineering, enterprise geospatial solutions, intelligence analysis, and technical services to intelligence, defense, and homeland security customers.
